

GreenSoil Group

Your soil. Our Responsibility.

We design and deploy tailor-made solutions to biologically remediate soil and groundwater and decontaminate even the most challenging sites all around the world.

LEADING EXPERT IN SUSTAINABLE SOIL REMEDIATION

We are the GreenSoil Group

We design and deploy tailor-made solutions to biologically remediate the soil and groundwater and decontaminate even the most challenging sites all around the world.

We do this with the highest degree of reliability and accountability to meet both regulatory and aspirational safety & sustainability standards.

Quality & Safety

The nature of our activities brings us to work in challenging conditions. Thus, workplace health & safety is our highest priority. GreenSoil aims at delivering high quality work in a safe manner, aiming at a Goal ZERO Accident and ZERO Tolerance with deviations.

GreenSoil has adopted a SHEQ system, which is based upon the Belgium / Dutch quality and safety standards, which guarantees the high quality & safety level of our projects operation.

Performance assurance

GreenSoil Group aligns its success with that of our clients by offering performance-based contracts. The large experience of our employees allows to provide cost-efficient projects intended to meet the agreed clean-up target values and quality & safety standard for a wide variety of contaminants.

One of the main business models of GreenSoil Group is risk-based contracting and liability take over.

Our process

Tailor-made solutions

Guaranteeing the best solution to your challenge is our commitment. To attain this goal, we work in collaboration with local partners to deliver cleaned sites by means of tailor-made & cost-effective solutions. Due to the diversity of our client portfolio, customized solutions are crucial to meet the requirements of their complex site environments.

A constructive approach and the flexibility of our systems allow us to deploy our remediation systems in operational plants as well as in combination with redevelopment works.

Research

R&D team tests and develops new biological solutions for sustainable soil remediation for conventional and emerging contaminants.

Design

Custom remediation solutions to meet your goals effectively and efficiently.

Deploy

Implementation of international remediation solutions.

Contracting

Financial and liability risk management solutions by means of time & expenses, risk-based contract and liability take over.
